1. Downloading ClickUnit

Note:
TODO

2. Downloading the necessary dependencies

ClickUnit requires the following libraries:

- Jakarta Struts
- Jakarta Commons HTTPClient
- Jakarta Commons Lang
- Jakarta Commons Codec
- Jakarta Log4j

To download the necessary libraries simply type the following command in the ClickUnit directory:

```
ant getLibs
```

3. Configureing

Create a build.properties file in the ClickUnit directory. A sample file named build.properties.sample is provided.

4. Deploying

To deploy ClickUnit simply run the following command, if your web-container provides a managment interface:

```
ant install
```

If your web-container does not provide a managment interface, then you must deploy the contents of the build directory manually after compileing the application. To compile ClickUnit just run the following command:

```
ant
```
